

CampbellCrimpnology™ offers hose assembly systems for all your chemical applications!

ChemJoint Couplings are available with weld ends for use with metal hose.

CHEMJOUNT™ COUPLINGS & MALE STEMS

Description

ChemJoint Couplings and Male Stems create an extremely versatile chemical hose assembly system. The system solves problematic cam and groove issues such as pressure, temperature, side load, viscosity, line dedication and ergonomics.

Features and Benefits

- Graduated serration pattern - sharper near the interlock, rounder near the end. Grips and seals plastic lined chemical hose without cutting through the tube.
- Interlock-groove locks ferrule into place for the ultimate in holding power.
- Crimped assemblies are low profile and eliminate sharp edges from bands.
- Viton seal allows coupling to meet pressure ratings with nut hand tightened.

Recommended hose attachment

- Interlocking ferrules
- Preformed bands (Section I)
